1 Introduction

FdSymbol is a font of mathematical symbols designed as a companion to Typotheque's Fedra family¹, but it might also fit well to other contemporary typefaces. To use this font in a L^AT_EX document, add the command

```
\usepackage[<options>]{fdsymbol}
```

¹<http://www.typotheque.com/fonts>

Key	Values
normalweight	Book*, Demi, auto
boldweight	Medium*, Bold, auto
scale	$\langle factor \rangle$
largedelims	true, false*
opstyle	serif*, sans

Table 1: Summary of options

to the preamble of your document. This redefines most of the standard mathematical symbols and makes available many new ones (see Section 5). For the available options see Section 3.

Acknowledgements

The FdSymbol font is derived from MnSymbol², another math symbol font, designed by Achim Blumensath.

2 Interferences with other packages

The fdsymbol package is incompatible with the amssymb and amsfonts packages. It automatically loads the amsmath and textcomp packages. If you want to pass options to these packages, you can either load these packages before fdsymbol or you can include the options in the \documentclass command.

3 Options

All package options are set using a $\langle key \rangle = \langle value \rangle$ syntax. Boolean options accept true and false as values, and setting a Boolean key without a value is equivalent to setting it to true. Table 1 lists all option keys of the fdsymbol package with their possible values; values that are marked with an asterisk correspond to the default behaviour of the package.

4 Font selection

4.1 Weights

FdSymbol comes in four weights, which are (in increasing order) Book, Demi, Medium and Bold. Of these, Book and Demi are suitable for normal math typesetting, while Medium and Bold can be used for bold math typesetting. Using the options normalweight and boldweight, you can select which weights are

²<http://www.ctan.org/pkg/mnSymbol/>

used. For example, to use the Medium weight as the normal weight in math, add `normalweight=Medium` to the package options. Analogously, to use the Bold weight with `\boldmath` or `\boldsymbol`, add `boldweight=Bold` to the package options. By default, Book and Medium are used. Additionally, it is possible to use a suitable weight automatically depending on the font size by selecting `auto`. For example, if you use the option `normalweight=auto`, the Book weight will be used for normal and large sizes, but the Demi weight will be used for small sizes (e.g. in sub- and superscripts).

4.2 Size

In order to use FdSymbol with different text fonts, it is possible to scale the fonts by an arbitrary factor. This can be achieved with the option `scale`. For example, to use the fonts at 90 % of their original size, you can add `scale=0.9` to the package options. Finally, it is possible to increase the height of delimiters slightly (by 20 % in text size and by 25 % in `\big` size). This can be achieved by activating the option `largedelims`. Use this option if you want to combine FdSymbol with a text font that has rather tall delimiters, such as Fedra Serif B. In fact, the height of normal delimiters will match the height of text delimiters in Fedra Serif B if you select this option.

4.3 Stylistic variants

In order to use FdSymbol with sans-serif text fonts, there are sans-serif variants of glyphs that contain a product or summation sign. These can be accessed by the commands `\varprod`, `\varcoprod`, `\varsum`, etc. To access these glyphs using the standard commands `\prod`, `\coprod`, `\sum`, etc., use the option `opstyle=sans`. If this option is active, the serif variants of these glyphs can be accessed by the `\var...` commands instead.

5 Symbols

The `fdsymbol` package provides the following symbols.

5.1 Ordinary symbols

<code>...</code>	<code>\hdots</code>	<code>::</code>	<code>\squaredots</code>
<code>:</code>	<code>\vdots</code>	<code>\neg</code>	<code>\lnot</code>
<code>\therefore</code>	<code>\udots, \adots</code>	<code>\backneg</code>	<code>\invnot, \invneg</code>
<code>\therefore</code>	<code>\ddots</code>	<code>\turnedneg</code>	<code>\turnednot</code>
<code>\therefore</code>	<code>\righttherefore</code>	<code>\turnedbackneg</code>	
<code>\therefore</code>	<code>\uptherefore, \therefore</code>	<code>\largetriangleup</code>	
<code>\therefore</code>	<code>\lefttherefore</code>	<code>\largetriangledown</code>	
<code>\therefore</code>	<code>\downtherefore, \because</code>	<code>\emptyset</code>	<code>\diameter,</code>

\varnothing	\varnothing
\revemptyset	\prime
\largecircle, \lgwhtcircle	\backprime
\largeblackcircle	\checkmark
\largesquare, \lgwhtsquare	\lightning, \downzigzagarrow

5.7 Faked symbols

The following symbols are taken from the text font or another math font (in case of \Bbbk , \Re and \Im).

\dagger	<code>\dagger</code>	\mathbb{k}	<code>\Bbbk</code>
\ddagger	<code>\ddagger</code>	\mathfrak{R}	<code>\Re</code>
\P	<code>\mathparagraph</code>	\mathfrak{I}	<code>\Im</code>
\S	<code>\mathsection</code>	\mathfrak{h}	<code>\hbar</code>
$\$$	<code>\mathdollar</code>	\mathfrak{h}	<code>\hslash</code>
\textsterling	<code>\mathsterling</code>	\mathbb{R}	<code>\circledR</code>
\textyen	<code>\yen</code>	\mathbb{S}	<code>\circledS</code>

5.8 Missing symbols

The following symbols from Computer Modern or the AMS fonts are missing in `FdSymbol`. If available, they should be taken from the text font.

mho	<code>\mho</code>	varkappa	<code>\varkappa</code>	rhook	<code>\rhook</code>
nabla	<code>\nabla</code>	backepsilon	<code>\backepsilon</code>	diagup	<code>\diagup</code>
eth	<code>\eth</code>	mapstochar	<code>\mapstochar</code>	diagdown	<code>\diagdown</code>
digamma	<code>\digamma</code>	lhook	<code>\lhook</code>		

6 Implementation

```
1 {*style}
2 \RequirePackage{xkeyval}
3 \newcommand*\fdsy@choicekey[3]{%
4   \define@choicekey*{fdsymbol.sty}{#1}[\@tempa\@tempb]{#2}{#3}%
5 }
```

We use `xkeyval`'s key mechanism to declare all options. The first option determines the size of delimiters.

```
6 \define@boolkey{fdsymbol.sty}[fdsy@]{largedelims}[true]{}
```

The next option allows to scale the fonts by an arbitrary factor.

```
7 \newcommand{\fdsy@scale}{1.0}
8 \define@key{fdsymbol.sty}{scale}{\renewcommand{\fdsy@scale}{#1}}
```

The following two options control which weights are used for which math version and font size.

```
9 \newcommand{\fdsy@mweight@normal}{Book}
10 \newcommand{\fdsy@mweight@small}{Book}
11 \newcommand{\fdsy@bweight@normal}{Medium}
12 \newcommand{\fdsy@bweight@small}{Medium}
13 \fdsy@choicekey{normalweight}{book, regular, auto}{%
14   \ifcase\@tempb\relax
15     \renewcommand{\fdsy@mweight@normal}{Book}%
16     \renewcommand{\fdsy@mweight@small}{Book}%
}
```

```

17   \or
18     \renewcommand\fdsy@mweight@normal{Demi}%
19     \renewcommand\fdsy@mweight@small{Demi}%
20   \or
21     \renewcommand\fdsy@mweight@normal{Book}%
22     \renewcommand\fdsy@mweight@small{Demi}%
23   \fi
24 }
25 \fdsy@choicekey{boldweight}{medium,bold,auto}{%
26   \ifcase\@tempb\relax
27     \renewcommand\fdsy@bweight@normal{Medium}%
28     \renewcommand\fdsy@bweight@small{Medium}%
29   \or
30     \renewcommand\fdsy@bweight@normal{Bold}%
31     \renewcommand\fdsy@bweight@small{Bold}%
32   \or
33     \renewcommand\fdsy@bweight@normal{Medium}%
34     \renewcommand\fdsy@bweight@small{Bold}%
35   \fi
36 }

```

Finally, the following option controls the style of large operators.

```

37 \newif\iffdsy@sop
38 \fdsy@choicekey{opstyle}{serif,sans}{%
39   \ifcase\@tempb\relax
40     \fdsy@sopfalse
41   \or
42     \fdsy@soptrue
43   \fi
44 }
45 \ExecuteOptionsX{largedelims=false,opstyle=serif}
46 \ProcessOptionsX

```

Load external packages, but only if they are not already loaded in order to avoid warning messages about loading a package twice with different options.

```

47 \@ifpackageloaded{amsmath}{}{\RequirePackage{amsmath}}
48 \@ifpackageloaded{textcomp}{}{\RequirePackage{textcomp}}

```

If the option `largedelims` has been selected, we readjust the scaling factors of big delimiters, so that `\Big`, `\bigg` and `\Bigg` do not change their size.

```

49 \iffdsy@largedelims
50   \renewcommand{\Big}{\bBigg@\{1.25\}}
51   \renewcommand{\bigg}{\bBigg@\{1.66\}}
52   \renewcommand{\Bigg}{\bBigg@\{2.08\}}
53 \fi

```

Some symbols missing from FdSymbol can be obtained from other fonts or by combining several other symbols.

```

There is no \not symbol in FdSymbol since all relational symbols come with a stroked companion. For compatibility we define a \not command that places a virgule over the following symbol.

```

1980 \def\c@nce1#1#2{\m@th\ooalign{$\hfil#1/\hfil$\crcr$#1#2$}}
1981 \def\not#1{\mathrel{\m@th\mathpalette\c@nce{#1}}}
1982 (/style)

```
