LATEX News

Issue 2, December 1994 (LATEX release 1994-12-01)

Welcome to LATEX News 2

An issue of $I\!AT_E\!X$ News will accompany every future release of $I\!AT_E\!X$. It will tell you about important events, such as major bug fixes, newly available packages, or any other $I\!AT_E\!X$ news.

December 1994 release of LATEX

December 1994 sees the second release of IATEX 2_{ε} . We are on schedule to deliver a release of IATEX every six months, in December and June.

This release has seen quite a lot of activity, which is not too surprising as it's only been a year since the first test release of $IAT_{E}X 2_{\mathcal{E}}$. We don't expect so much activity in the next six months.

Many of the changes are minor improvements and bug-fixes—see $LAT_EX 2_{\varepsilon}$ for authors (usrguide.tex), $LAT_EX 2_{\varepsilon}$ font selection (fntguide.tex) and our change log (changes.txt) for more details.

However, there are two important new packages available for IAT_FX: inputenc and AMS-IAT_FX.

Accented input

One of the problems with writing non-English documents in LATEX is the accent commands. Reading documents containing text like na\"\i ve is frustrating, especially if your keyboard allows you to type naïve.

In the past, IATEX has not supported input containing accented characters such as \ddot{r} , because Windows, Macintosh and Unix all have different ways of dealing with accented input, called *input encodings*.

However, the inputenc package allows you to specify which input encoding your document is written with, for example to use the ISO Latin-1 encoding, you type:

\usepackage[latin1]{inputenc}

At the moment, inputenc supports the ascii and latin1 input encodings, but more will be added with future releases.

The inputenc package is currently a test release. The user interface for the full release will be upwardly compatible with the test version.

AMS-LATEX

AMS-LATEX is a set of miscellaneous extensions for LATEX distributed by the American Mathematical Society. They provide superior information structure

and superior printed output for mathematical documents.

There are far too many features of AMS-IAT_EX to list here. AMS-IAT_EX is described in the accompanying documentation, and in *The IAT_EX Companion*.

Version 1.2 beta of AMS-IAT_EX was released for testing by intrepid users in October 1994. The full release of AMS-IAT_EX 1.2 is expected in early January 1995.

It will be divided into two bundles:

- the amsfonts packages, which give access to hundreds of new mathematical symbols, and new math fonts such as blackboard bold and fraktur.
- the amsmath packages, which provide finer control over mathematical typesetting, such as multi-line subscripts, enhanced theorem and proof environments, and improved displayed equations,

For compatibility with older documents, an **amstex** package will be provided.

LATEX on the internet

 ${\rm I\!AT}_{\rm E\!X}$ has its own home page on the World Wide Web, with the URL:

http://www.tex.ac.uk/CTAN/latex/

This page describes IAT_EX and the IAT_EX3 project, and contains pointers to other IAT_EX resources, such as the user guides, the T_EX Frequently Asked Questions, and the IAT_FX bugs database.

The electronic home of anything T_EX -related is the Comprehensive T_EX Archive Network (CTAN). This is a network of cooperating ftp sites, with over a gigabyte of T_EX material:

ftp://ftp.tex.ac.uk/tex-archive/
ftp://ftp.shsu.edu/tex-archive/
ftp://ftp.dante.de/tex-archive/

For more information, see the ${\rm IAT}_{\rm E}\!{\rm X}$ home page.

Further information

For more information on T_EX and I^AT_EX, get in touch with your local T_EX Users Group, or the international T_EX Users Group, P. O. Box 869, Santa Barbara, CA 93102-0869, USA, Fax: +1 805 963 8358, EMail: tug@tug.org.
