

# The `twoopt` package

Heiko Oberdiek\*

2016/05/16 v1.6

## Abstract

This package provides commands to define macros with two optional arguments.

## 1 Usage

`\newcommandtwoopt` Similar to `\newcommand`, `\renewcommand` and `\providecommand` this package provides commands to define macros with two optional arguments. The names of the `\providecommandtwoopt` commands are built by appending the package name to the L<sup>A</sup>T<sub>E</sub>X-pendants:

```
\newcommandtwoopt  {⟨cmd⟩} [⟨num⟩] [⟨default1⟩] [⟨default2⟩] {⟨def.⟩}  
\renewcommandtwoopt {⟨cmd⟩} [⟨num⟩] [⟨default1⟩] [⟨default2⟩] {⟨def.⟩}  
\providecommandtwoopt {⟨cmd⟩} [⟨num⟩] [⟨default1⟩] [⟨default2⟩] {⟨def.⟩}
```

Also the `*`-forms are supported. Indeed it is better to use this ones, unless it is intended to hold whole paragraphs in some of the arguments. If the macro is defined with the `*`-form, missing braces can be detected earlier.

Example:

---

\*Please report any issues at <https://github.com/ho-tex/oberdiek/issues>

```

\newcommandtwoopt{\bsp}[3][AA][BB]{%
  \typeout{\string\bsp: #1,#2,#3}%
}
\bsp[aa][bb]{cc} → \bsp: aa,bb,cc
\bsp[aa]{cc}      → \bsp: aa,BB,cc
\bsp{cc}          → \bsp: AA,BB,cc

```

## 2 Implementation

```

1 (*package)
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{twoopt}
4   [2016/05/16 v1.6 Definitions with two optional arguments (HO)]%

\newcommandtwoopt
5 \newcommand{\newcommandtwoopt}{%
6   \ifstar{\@newcommandtwoopt}{\@newcommandtwoopt{}}

62 \newcommand{\to@ArgOptToArgArg}{}%
63 \long\def\to@ArgOptToArgArg#1[#2]{{#1}{#2}%
64 </package>

```

### 3 Installation

#### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/twoopt.dtx](http://CTAN:macros/latex/contrib/oberdiek/twoopt.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/twoopt.pdf](http://CTAN:macros/latex/contrib/oberdiek/twoopt.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://CTAN:install/macros/latex/contrib/oberdiek.tds.zip)

*TDS* refers to the standard “A Directory Structure for TEX Files” ([CTAN:pkg/tds](http://CTAN:pkg/tds)). Directories with `texmf` in their name are usually organized this way.

---

<sup>1</sup>[CTAN:pkg/twoopt](http://CTAN:pkg/twoopt)

## 3.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

## 3.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `TEX`:

```
tex twoopt.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
twoopt.sty → tex/latex/oberdiek/twoopt.sty  
twoopt.pdf → doc/latex/oberdiek/twoopt.pdf  
twoopt.dtx → source/latex/oberdiek/twoopt.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 3.4 Refresh file name databases

If your `TEX` distribution (`TEX Live`, `MiKTEX`, ...) relies on file name databases, you must refresh these. For example, `TEX Live` users run `texhash` or `mktexlsr`.

## 3.5 Some details for the interested

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{twoopt.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex twoopt.dtx  
makeindex -s gind.ist twoopt.idx  
pdflatex twoopt.dtx  
makeindex -s gind.ist twoopt.idx  
pdflatex twoopt.dtx
```

## 4 History

### [1998/10/30 v1.0]

- The first version was built as a response to a question of Rebecca and Rowland<sup>2</sup>, published in the newsgroup `comp.text.tex`:  
“Re: [Q] LaTeX command with two optional arguments?”<sup>3</sup>

### [1998/10/30 v1.1]

- Improvements added in response to Stefan Ulrich<sup>4</sup> in the same thread:  
“Re: [Q] LaTeX command with two optional arguments?”<sup>5</sup>

### [1998/11/04 v1.2]

- Fixes for LaTeX bugs 2896, 2901, 2902 added.

### [1999/04/12 v1.3]

- Fixes removed because of LaTeX [1998/12/01].
- Documentation in dtx format.
- Copyright: LPPL ([CTAN:macros/latex/base/lppl.txt](#))
- First CTAN release.

### [2006/02/20 v1.4]

- Code is not changed.
- New DTX framework.
- LPPL 1.3

### [2008/08/11 v1.5]

- Code is not changed.
- URLs updated from [www.dejanews.com](http://www.dejanews.com) to [groups.google.com](http://groups.google.com).

### [2016/05/16 v1.6]

- Documentation updates.

## 5 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
